

[ViM by Inilex, Inc.](#)

January 30, 2007

Introducing a security solution that can retrieve stolen vehicles, monitor teenage drivers' whereabouts and speed, and cool or heat vehicles remotely. Cool or heat your car before you enter it. The Inilex security GPS product allows users to monitor and control their vehicles wirelessly via any phone or the Internet. The Inilex ViM plugs into the car and can unlock doors, set alarms, start the engine and control a host of other functions without the need for complicated wiring. Just plug and play.
